The flood of data has now reached the trillion range worldwide. The trend now goes from Big Data to predictive analysis. This is how data is evaluated and the relevant data is processed and stored.
Data centers grow and must be able to grow. The cabling within a data center should always be viewed as a long-term investment. It is the foundation - it allows the interaction of all components. The quality of the cabling also determines the downtimes.

The better the foundation, the less error-prone your data center is. Well-planned, structured cabling brings order to the data center and also saves time. Installations and conversions are done so quickly and efficiently.

DIGITUS® Professional provides you with fiber optic and copper cabling according to your wishes. Our solutions do not only meet your requirements but whatever current standards and regulations of course. They are tested. You can view all certificates before buying.

Available worldwide

We are a strong, customer-oriented logistics service provider. Our products can be procured and shipped worldwide. This is possible thanks to our regional warehousing in our own logistics centers. Thanks to our expanded high-bay warehouse facilities at our headquarters in Lüdenscheid, we can guarantee high delivery capacity.

Implement projects successfully - delivery up to the construction site

Our product managers know our cables from the sheathing to the twisting. They know what is really needed locally at the construction site or in the data center. Our team will gladly create an individual offer for you and will be happy to support you in optimally planning your project from the ground up.
DIGITUS® Professional offers you components and products for technical building equipment used in data centers, e.g. for automotive manufacturers, airports, universities and industrial companies. With DIGITUS® Professional, demanding users, specialist companies, installers and data center specialists receive the products they need for the optimal design of their projects. As a manufacturer and distributor with subsidiaries in Europe and Asia, we work together with international system integrators, distributors and resellers.

Over 45 years of experience in the IT industry

We offer you all the building blocks for the construction, operation and restructuring of successful and efficient data centers.
ORGANIZE INFRASTRUCTURE
We make the data center better organized!

REDUCE COMPLEXITY
We make the data center easier to understand!

INCREASE RELIABILITY
We make the data center more secure!

INCREASE EFFICIENCY
We make the data center more productive!

USE INTELLIGENT TECHNOLOGY
We make the data center more environmentally friendly!
CONSTRUCTION PRODUCTS REGULATION

The Construction Products Regulation (CPR) refers to the CE marking of cables.
"High-voltage cables and lines, control and communication cables -
cables and lines for general use in construction works relating
to the fire behavior requirements EN 50575"

This regulation has existed for over 15 years, but has not imposed any requirements on copper and fiber optic cables so far. Of course, we are familiar with the CE marking that is used for active devices and components such as power strips, cameras and Ethernet switches.

The testing standards for all EU member states were now ratified and announced in the official journal of the EU (305/2011) in February 2016. The regulation itself entered into force on July 1, 2016, but it is granted coexistence until July 1, 2017. During this period, untested products can continue to be sold and installed - meanwhile, manufacturers are required to test the cables and classify them according to the new standard. Until July 1, 2017, all products affected by the new regulation must then be checked and marked accordingly. The major change in the specifications is the replacement of the fire protection class IEC 60332 by a series of Euro classes ($A_{ca}$ – $F_{ca}$). Where $A_{ca}$ is the strongest and $F_{ca}$ is the weakest flame retardant.

The $E_{ca}$ and $B_{ca}$ classes have come into focus because they contain most of the changes in terminology and the specification requirements. The $E_{ca}$ class corresponds to the existing IEC 60332-1. The class with the currently higher requirements for fire performance IEC 60332-3 lies between the new Euro classes $B_{ca}$ and $C_{ca}$. However, it leans more towards the $C_{ca}$ class. The task of the cable industry now is to rework the respective cables and has the goal of meeting the requirements of these new classes.

</table>
The Construction Products Regulation refers "only" to the "permanently laid/installed infrastructure", thus it does not contain any connection components or patch cables and also any compact modules. However, it covers all prefabricated solutions, such as fiber optic/copper trunk cables, which are considered to be "permanently installed". These are dependent, however, on the mass cable certification on which the assembly was built.

A requirement of the new Euro classes: Manufacturers of cabling systems are responsible for deciding whether to test the cables themselves or to commission an external company to verify compliance with the standards. This is listed in detail in EN 50575. Finally, a "notified body" must be commissioned to approve test results. Products cannot be labeled in accordance with the Euro class or be regarded as compliant without the certifying body’s confirmation of the test results.

But how does a certifying body become a "notified body"? If a certifying body wants to apply for "notified body" status, this process usually takes two to three weeks. After receiving "notified body" status, it is able to evaluate the customer’s test data (manufacturers, cabling system vendors, distributors) and subsequently issue a report and a certificate. It is expected that this certification process will take another two to three weeks.

What is the impact of the Construction Products Regulation on you - our customers - and DIGITUS® Professional?

The introduction of this regulation is a significant development and needs to be clearly understood by all actors involved in the structured cabling market. These changes to the product design as well as the correct marking and packaging should be mandatorily effected and must be observed by the distributors. It is to be expected that the requirements of the new specifications will be understood by market participants within the coexistence period of the regulation. We are well-prepared for the introduction of the new cable classes and will distribute the Eca and Dca class cables from Q2 2017 as planned.
New regulation CE directive for "permanently installed communication cables"

On July 1, 2017, there will be a radical change in the cabling industry. The change was already adopted on July 1, 2016, but there is a grace period of 12 months. During this time, communication cables without CE marking can be sold. This period is referred to as coexistence.

CE markings must be affixed on copper and fiber optic installation cables according to law. CE marking does not necessarily have to be carried out on the cable, but nevertheless in the form of a sticker on the packaging materials such as the cardboard box and the cable drum. CE marking on patch cables is not necessary, since patch cables are not regarded as "permanently laid" cables.

The new EN 50575 standard includes power, telecommunication and signal cables for general use in construction works. Precisely for this reason, the installation cables currently used are, for example: Copper Cat. 7 S/FTP AWG23/1 – Fiber optic I-DQ (ZN) BH 4 G 50/125µ OM4 are impacted by the regulation because these are "permanently" installed in the building. The good news in this context is that the product management of DIGITUS® Professional has already begun to declare the cables according to legislation and the new EN 50575 standard. Thus, from the end of Q1 | 2017, future deliveries of goods are already guaranteed with CE marking and Euro classification in accordance with EN 50575.

In this context, one also speaks of accompanying documents, the so-called DoP (Declaration of Performance) documents. If a cable has CE marking, then the product also has a valid DoP. The DoP confirms the performance for the respective product and the fire properties. An installation cable with CE marking without an associated DoP is not compliant! With the introduction of CE marking for laying cables, the European Union has allowed the products to be compared with regard to fire properties, since the cables are classified, documented and certified by "notified bodies" - accredited testing bodies.
TIER AT A GLANCE

Data centers are divided into different ranks. The 4 TIER standards provide information on the quality level of the individual data center. In this test, availability and failure safety come first, but at the same time, the results of energy efficiency, system technology, data security and administration of the data center are also included in the evaluation.

We gladly preempt the answer: Copper and fiber optic are the perfect partners. Use the respective advantages of the materials intelligently. This allows high speeds to be reached while saving costs at the same time.

Fiber optic cables guarantee high data transmission rates and exhibit a higher packing density than copper cables. The optic fiber totally demonstrates its advantages over long distances. Therefore, the basic backbone cabling in the data center is based mainly on fiber optic cables. Since fiber optic cables are more expensive to purchase, the combination with the tried and tested copper cables is worthwhile. They are more cost-effective, easy to install, bring about low assembly costs and are easier to integrate into existing network structures. Use copper cables for short distances, such as top-of-the-rack or mid-of-the-rack cabling.

Of course, we also offer you a variety of MPO solutions. These are indispensable in high-end state-of-the-art data centers.
HIGH DENSITY
More power in less space

High density distribution panels from DIGITUS® Professional provide 24 RJ45 ports on a half height unit or 48 RJ45 ports on one height unit for the cabling in the network cabinet. You can double the number of ports on the same space within your rack. The modular patch panels are suitable for all tool-free keystone modules from DIGITUS® Professional and have a central ground connection and a practical labeling field.
The high-density distribution panel is an efficient way to increase port density in cabinets. These distribution panels are available for your own equipment without a keystone module. It can be used universally in all 483 mm (19") distribution cabinets. The matching keystone modules from DIGITUS® Professional can be obtained individually or in practical 24-piece packaging units.

### HIGH DENSITY DISTRIBUTION PANEL (DN-91424) - 48 PORTS ON ONE HEIGHT UNIT

The high-density distribution panel is an efficient way to increase port density in cabinets. These distribution panels are available for your own equipment without a keystone module. It can be used universally in all 483 mm (19") distribution cabinets. The matching keystone modules from DIGITUS® Professional can be obtained individually or in practical 24-piece packaging units.

### PRODUCT INFORMATION
- **Black (RAL 9005), shielded**

### AREA OF APPLICATION
- **483 mm (19") cabinet**

### NORMS
- ISO/IEC 11801 2nd Ed., EN 50173-1, EIA/TIA 568-C

### GENERAL PROPERTIES
- Suitable for 483 mm (19") cabinet mounting, Suitable for shielded DIGITUS® Keystone Modules and Couplers, Cable fixing with cable tie, Central grounding connection, Integrated dust cover, Plastic label field

### PACKAGE CONTENT
- Distribution Panel, Cable Tie

### TECHNICAL PROPERTIES
- **HOUSING MATERIAL:** 1.5 mm SPCC cold rolled steel sheet, powder-coated
- **MATERIAL STANDARD:** EN 10 130(1991), BS 1449, NFA 36/401, DIN 1623, UNI 5866, ENE 36-086, SIS, JIS G 3141, ASTM, SAE
- **GROUNDING BAR MATERIAL:** Galvanized steel
- **GROUNDING WIRE:** 18 AWG, 40 cm

### PHYSICAL PROPERTIES
- **OPERATING TEMPERATURE:** -20 °C to +70 °C (ISO/IEC 11801, EN 50173-1, ANSI/TIA/EIA 568 C)

### PRODUCT NUMBER
- 48 Ports, 1U, Layout double-row straight: DN-91424
- 24 Ports, 0.5U, Layout single-row straight: DN-91422

**PRODUCT NUMBER**
- DN-96615-2

**DIGITUS® Professional**

**MPO/MTP® - CASSETTE FOR THE 5 CASSETTE PATCH PANEL**

**MPO/MTP® PATCH PANEL FOR 5 CASSETTES**
**DIGITUS** Professional

**483 mm 19” PATCH PANEL (LSA+) CAT 6A, SHIELDED**

**PRODUCT INFORMATION**

- **24 Ports, Grey (RAL 7035), 1 U**

**AREA OF APPLICATION**

- **Up to 500 MHz, 10GBase-T**

**NORMS**

- ISO/IEC 11801 2nd Ed.; EN 50173-1; EIA/TIA 568-C
- 802.3af; 802.3at PoE+

**GENERAL PROPERTIES**

- Suitable for 483 mm (19") cabinet mounting, RJ45 Female, 8P8C, Cable installation via LSA+-strips, color coded according to EIA/TIA 568 A & B Cable fixing with cable tie, Central ground connection, 360°-shield contact, Integrated dust cover, Plastic label field

**PACKAGE CONTENT**

- Patch Panel, Cable Tie

**PRODUCT NUMBER**

- Category 6A, Class E
- DN-91624S-EA

**TECHNICAL PROPERTIES**

- **HOUSING MATERIAL:** 1.5 mm galvanic cold rolled steel, acc. to EN1.4301, UNS S30400, AISI 304 and LMSAD110
- **RJ45 FEMALE MATERIAL:** Housing: ABS UL 94V-0
- **CONTACT:** Tinned phosphor bronze
- **0.5 µ gold-plated contact**
- **RJ45 SHIELDING:** Tinned bronze
- **LSA TERMINATION CLAMP:** Krone LSA+, UL 94V-2, Tinned phosphor bronze
- **CONDUCTOR PLATE:** FR4, UL 94V-0

**PHYSICAL PROPERTIES**

- **INSERTION FORCE:** 30N max. (IEC 60603-7-5)
- **RETENTION STRENGTH:** 7.7 kg between jack and plug
- **OPERATION TEMPERATURE:** -20 °C to +70 °C (ISO/IEC 11801, EN 50173-1, ANSI/TIA/EIA 568 C)
- **MATING CYCLES FEMALE:** > 750 acc. to ISO/IEC 11801, IEC 60603-7-5
- **CLAMP:** > 200 acc. to ISO/IEC 11801, IEC 60603-7-5
- **IDC WIRE SIZE:** 22 – 26 AWG solid and stranded conductor
- **INSULATION RESISTANCE:** > 500 MΩhm
- **CONTACT RESISTANCE:** < 20 MiliOhm
- **DIELECTRIC STRENGTH:** 1000 VDC (Contact/Contact)
- **STRENGTH:** 1500 VDC (Contact/Ground)
The splice box is the place in the cabinet where the individual fibers of a fiber optic cable are split. They provide couplers for connecting various types of connectors. Our splice boxes have a practical telescopic extension. This allows the cabling to work without having to remove the entire box. You will receive splice boxes that operate in the OM2 to OM5 and OS2 categories. They are assembled with 6, 12 or 24 ready to splice couplers and therefore include up to 48 fibers spread over up to 4 splice cassettes.

Take advantage of our assembly offer: We assemble the various versions with screw connections, splice cassettes and all types of couplers according to your wishes.

**SPLICE BOXES**

**DIgITUS** Professional

**SPLICE BOX, EQUIPPED WITH LC DUPLEX COUPLERS**

**PRODUCT INFORMATION**

Cable strap and PG screw connection, 4 possible entries with PG screw connection, Measurements (HxWxD): 44.45 (1U) × 483 (19") × 280 mm

**HOUSING:**

Full metal varnished light grey (RAL 7035) or black (RAL 9005, please add an -B behind the article number), Numbers as screen printing

**FRONT PLATE:**

483 mm (19") with mounted LC Duplex Couplers (plastic housing)

**LAYOUT:**

Up to 48 fibers / 4x splice cassettes

DATA PROTECTION

More than a virtual challenge

Physical protection measures are just as important as the virtual ones in the data center. Data center operators setup different security zones for this purpose. Each area has its own security concept. From the outside, through the office spaces to the core of the data center - with the WDR cameras, DIGITUS® Professional offers you high-quality equipment for monitoring your data center.

**PROTECTION ZONE 1**
Entrance to buildings with data center

**FIRE PROTECTION:**
No special requirements

**PROTECTION ZONE 2**
Access/entrance protection zone 2, external security rooms, data center entrance, data center offices, storage rooms, test/configuration rooms

**FIRE PROTECTION:**
Fire alarm system, fire extinguishing system optional, F60 (EN 1634)

**PROTECTION ZONE 3**
Server rooms, surveillance rooms, data center, security rooms, conference rooms

**FIRE PROTECTION:**
Fire alarm system, fire detection, fire extinguishing system, F90 (EN 1634), EN 1047-2

**PROTECTION ZONE 4**
Special sections within the server rooms

**FIRE PROTECTION:**
Fire alarm system, fire detection, fire extinguishing system, F90 (EN 1634), EN 1047-2
SICHERHEIT ZONE

Crystal-clear images in any lighting thanks to WDR technology

**DIGITUS® WDR cameras** are designed for **high-contrast light conditions** in high-security areas where a high degree of identification is required, and are therefore ideal for intelligent video analysis applications.

**802.3af Power over Ethernet (PoE)** makes installing the camera close to a **power outlet unnecessary**, since both data and power are transmitted over the twisted pair cable.

**DIGITUS® WDR cameras** are equipped with a **built-in microSD/SDHC card slot** for local storage and digital input/output (1DI/1DO) for alarm and sensor contacts.

In addition, the DIGITUS® standalone network offers you **video recorders (NVR)** that are tailored to the DIGITUS® camera portfolio.

So you get an intelligent video surveillance system.

For more information on the WDR security cameras from DIGITUS® Professional, please visit:

FIBER OPTIC

Solutions for predictive data analysis in real-time

The requirements for a data center are constantly increasing. More and more data should be available in an ever shorter time. In the 1980s, the standard requirement for a data center was still 1 GBase-s. Today, data center operators worldwide are faced with a real flood of data, which quickly rose to the trillions. The trend goes from mere management of Big Data to predictive analysis. Companies want to evaluate, analyze and make statements based on their data models on, for example, economic contexts, the stored data. So you will improve your service and gain a real competitive advantage. This only works if companies can work with their data and programs in real-time and do not have to invest much more for new solutions.

Fiber optic installations meet both requirements: You can reduce the very high cost of building infrastructure and cooling and provide a higher data transfer speed. For example, DIGITUS® Professional offers you MTP®/MPO plugs with a 12 or 24-core cable. Even now, up to 100 GB of data can be transmitted over the OM5 fiber.
Light speed alone is no longer enough
But at the end of this decade, we already have to get it to transfer over 400 GB. With DIGITUS® Professional, you can already lay the foundation for parallel optical transmission today, where data is transmitted over 4 fibers at the same time.

MTP®/MPO cables are available in 3 different variants:

METHOD A

METHOD B

METHOD C
We come into the dimension of a 24-core cable, the individual levels in the plug become relevant. In method A, Pin1 is no longer connected to Pin1. Instead, pin 1 is connected to pin 13 and pin 12 to pin 24 of the opposite side.

Since we normally work with a transmitter (TX) and a receiver (RX), one rotation should take place at one point. The following products are available to incorporate this rotation:

- the patch cable
- the fanout cassette
- the MPO cable

**ROTATION OF PATCH CABLES**

A-to-B patch cables

A-to-A patch cables
**PRODUCT INFORMATION**

The MPO / MTP® cable is designed for system solutions in data centers. This Fiber optic cable is typically equipped with 12 or 24 fibers. The plug you can get as a PC or as APC, with an usual attenuation of 0.3 dB. This cable is available as Trunk or round cable. MPO/MPT® plugs are available as male and female. MPO cables are also often combined with LC or SC connectors.

Our DIGITUS® Professional MPO/MTP® cables all meet the standard IEC61754-7 and the standard EN 50173-5. To insert the MPO/MPT® cables in the data center, they are either used as normal Uplink with same connectors or as fan-out with LC or SC couplers. Of course you can use boxes for installation in the rack. One Side contains the MPO/MPT® connection and on the other side are the SC or LC Couplers. The cables are available as OS2 and as OM2, OM3 and OM4 version.

**MECHANICAL FEATURES**

**PLUG:** MPO female  
**CABLE:** Ø 4.5 mm ± 0.2 mm, halogen-free (12 fibers)  
7.5×4.5 mm ± 0.2 mm, halogen-free (24 fibers)  
**PULLING FORCE:** Aramid (Kevlar)  
**PLUG CYCLES:** ≥ 500  
**POLARITY:** Typ A  
**BENDING RADIUS:** 15× outer diameter  
**FAN-OUT-CABLE:** 0.9 mm

**OPTICAL FEATURES**

**IL AT MULTIMODE:** Max. 0,4 dB  
**IL AT SINGLEMODE:** Max. 0,5 dB (PC); max. 0,3 dB (APC)  
**RL AT MULTIMODE:** Min. 30 dB  
**RL AT SINGLEMODE:** Min. 60 dB (APC)

**THERMAL FEATURES**

## PRODUCT INFORMATION

This MPO/MTP® cable is the revolution in the data center. Available is OM5 cable with 12 or 24 fibers. Through opening of the wideband window from 850 nm to 950 nm now 100G can be transferred over one fiber. For 400G you only need 4 fibers. You can read more about the OM5 fiber on page 37.

# DIGITUS® Professional
## UNIBOOT PATCH CABLE

### PRODUCT INFORMATION
The Uniboot patch cable improves the handling in applications with high packing density. With Uniboot patch cables you create more space in your rack and the ventilation is improved. The 2 mm dual-fiber cable is particularly suitable for easy cable management.

### SCOPE OF DELIVERY AND PACKAGING
Packed in polybag with measurement report

### MECHANICAL FEATURES
- **CONNECTOR:** Ceramic ferrule
- **CABLE:** Ø 2 mm LSZH (halogen-free)
- **CONSTRUCTION:** LC (IEC 61754-20)

### OPTICAL FEATURES
- **TYPICAL INSERTION LOSS:** ≤ 0,20 dB
- **MAX. INSERTION LOSS:** ≤ 0,25 dB
- **DURABILITY (500 MATING TIMES):** ΔI.L. ≤ 0,25 dB

### THERMAL FEATURES
- **OPERATING TEMP.:** -20° C / +75° C
- **STORAGE TEMP.:** -20° C / +85° C

**DIGITUS**

FIBER OPTIC CABLE
DIGITUS® Professional

BREAKOUT FIBER OPTIC CABLE

PRODUCT INFORMATION

DIGITUS® Professional breakout cables are constructed of up to 24.2 mm simplex cables stranded around a central strength member. Each simplex has its own aramid yarn strength member and jacket. These sub units are wrapped in a polyester tape and jacketed in LSZH.

THERMAL FEATURES

OPERATING TEMP.: -20° C ~ +60° C
STORAGE TEMP.: -20° C ~ +60° C
INSTALLATION TEMP.: -20° C ~ +60° C

Until now there have been multimode fiber types OM1 with 62 µm and OM2; OM3 and OM4 with 50 µm. All of these provide transmission in the wavelength range of 850 nm. This limitation of range and transmission speed is now being revolutionized by the OM5 fiber, which is referred to as a WideBand Multimode Fiber.

Until now, parallel optical transmission has been used to transmit a higher data rate. In this modality, multiple fibers are used to transmit the data simultaneously. This fragmentation of the data is now being optimized further. OM3 and OM4 fibers have been produced for the transmission window of 850 nm. With the OM5 fiber, the range from 850-950 nm wavelengths is now being produced in such a way as to extend the transmission to 4 wavelengths.

Thus, per wavelength up to 25 Gbps can be transmitted and 100 Gbps over one fiber, and at a distance of 150 m. Since the fiber is also compatible with OM3 and OM4, it can transmit data up to 200 m in the 850 nm waveband. Our DIGITUS® OM5 patch and MPO cables conform to the TIA-492AAE and IEC 60793-2-10 V. 6 fiber specification.

### Features:
- Designed for multi-wavelength systems
- Compatible with OM3 and OM4
- Very small macrobending sensitivity
- Duplex transmission of 40/100/400 GBws with SWDM (short wave division multiplexing)
Let’s be honest. Copper is still the most widely-used medium for data transmission in data centers today. You benefit from the unbeatable price and solid performance of this classic as a data center operator, also during optical transmission. The RJ45 plug provides a reliable standard. Cables should be installed quickly and with little effort. The development of Power over Ethernet (PoE) has also made copper cables shine again in the recent past. Because in addition to data, copper also conducts electricity and thus supplies end devices with the necessary power over the data cable.

**High-speed networks with copper – Cat. 8 makes it possible**

Our experts agree: Structured copper cabling systems will also accompany us in the years to come. There will also be suitable solutions in the future for the 40 GBase-T or even the 100 GBase-T requirement. Now, we can already supply you a Cat. 8 cable! The development of the plug is imminent. The Cat. 8 cable (DK-1843-VH-X) is available as class II (40 Gbase-T, 2 GHz) in the 2000 MHz variant. Using GG45 Nexans modules and GG45 Nexans patch cables, the cable transmits 40 GBase-T over a length of 30 meters, alternatively with Siemon Terra modules and patch cables.

Challenge for the future: We make no secret of it. Currently, cables and plugs can be offered, but the standard has not yet been finalized and confirmed.

DIGITUS’ Professional monitors the development of the new Category 8 with enthusiasm and will gladly inform you about the new top specification.

---

**THE CAT. 8 CATEGORY CAN BE DIVIDED INTO TWO CLASSES:**

**CLASS 1:**
- 1600 MHz U/FTP cable design
- American design
- Measurement standards lower than Class II
- Connector face (socket and plug) design on RJ45 - tuned socket and plug
- ARJ45, if necessary
- Standards come with the new ISO/IEC 11801 3rd Edition

**CLASS 2:**
- Class II 2000 MHz S/FTP cable design
- European design
- Measurement standards higher than Class I
- Connector face (socket and plug) GG45, Terra, BKS
- Standards come with the new ISO/IEC 11801 3rd Edition

The DIGITUS® Professional multi-pair trunk-cables enable you to have a cleanly bundled cable system. The installation cannot be more efficient. The space-saving trunk cables offer enough space in your network cabinet for optimum air circulation. Heat build-up is reduced, and you will consequently save energy when cooling your computer center.

You can obtain the multi pair trunk cables in the following versions:

- **DK-1743-12-001-RAW** DIGITUS® Professional, CAT 7 S/FTP multi pair trunk cable, 12-fold
- **DK-1743-6-001-RAW** DIGITUS® Professional, CAT 7 S/FTP multi pair trunk cable, 6-fold

Also available: CAT 6A U/UTP | F/UTP

**Trunk cables inclusive of measurement and packaging**

You can obtain the trunk cables in the quantity and length you require on request. In this way, rack-to-rack or top-to-mid-of-rack cabling will be child’s play for you.

**INFO:** Of course, a measuring protocol applies to all trunks that are delivered.

The DIGITUS® Professional offers you 19” server cabinets for your computer center. Regardless of whether it is a small server room or a large computer center, our cabinets offer your customers maximum stability and flexibility.

A good cabinet is the basis for every computer center, and with forward-planning, it will remain so for many decades.
All DIGITUS® Professional Patch Cables are ISO certified and meet the requirements acc. to EIA/TIA 568-B. A crossover version is available on request. The patch cables are available in the standard colors (grey, blue, black, green, red, yellow), but also special colors like white, orange, brown, purple, etc. are possible. Don’t hesitate to get in touch with us so we can discuss your wishes individually.

For a different color, please append the letters of the color to the end of the product number - e.g. 5 m black = DK-1613-A-050/BL
The product manager team from DIGITUS® Professional consists of real professionals. We are not theorists, we also feel at home on the construction site. We take part successfully in public tendering and design projects in banks, public authorities, airports, for private computer center operators and many more.

Are you looking for the right cabling for your data center? Are you planning to expand, do you want to increase capacity and what’s more, remain economical in the process?

Then do not hesitate to contact us directly. We will be happy to help you find the right product for your project and answer questions about standards and certificates.

We will also gladly organize the transport of the products right up to the construction site of your large project.
Final assembly - Count on our touch

Save time and money and allow us, for example, to directly assemble your required splice boxes. DIGITUS® Professional also offers you short delivery times for special customer requirements. Of course, we go beyond the standard in doing so. You will get assorted boxes, different cable types and individual labels. In the area of copper cabling, we supply you with customized trunk cables. If you utilize these with your top-of-the-rack to mid-of-rack cabling, then you can cable directly on site without having to dwell on assembly work (Keystone module).
We establish a connection: Between us and our customers, between components and devices. On our way, we have already cabled computer centers with the highest level of security on almost all continents. We support our customers with new cabling and help them in this way to exchange their existing structures with an innovative cabling solution.

Just in recent years, the demand for computer centers has grown enormously. The quicker things are upgraded, the less time there is for future-proof planning of the cabling. Uncontrolled growth and cable tangle are the result. Chaotically cabled cabinets do not work efficiently, overheat quickly and lead to unnecessary expenses. Together we will design your migration as effectively, fail-safe and investment secure as possible. Our solutions have a future and take into account the newest specifications and standards at all times.

Discretion is of paramount importance when designing computer centers. However, we will happily list for you the sectors in which we have already successfully placed our high-performance cabling solutions. These include: Universities, logistics centers, telecommunication companies, hotels, retail trade, banks, insurers, hospitals, airports, local authorities, ports, server farms as well as public authorities and organizations with security responsibilities.

MOTIVATED. SOLUTION-ORIENTED. THERE FOR YOU.
